

Montezuma Rain Forest, Costa Rica

2019/OCTOBER

	Sun	Mon	Tue	Wed	Thu	Fri	Sat
			There are more molecules in a teaspoon of water than there are teaspoons of water in all the world's oceans. 1	Over a lifetime, the average person walks approximately four times around the Earth. 2	The only rock that floats in water is pumice. 3	4	5
The human brain uses about 20% of the body's oxygen and caloric intake. 6	7	The greatest tidal change on Earth occurs in Canada's Bay of Fundy. 8	9	The folds and ridges of the outer human ear are called the pinna. 10	The sun makes up 99% of our solar system's mass. 11	Currently, there are no active volcanoes in Australia because it sits in the middle of a tectonic plate. 12	
13	On average, men have longer spinal cords than women. 14	Basilisk lizards can run on the surface of water and can reach a velocity of up to 4.8 feet/second for up to 66 feet. 15	16	Mars is about half the size of Earth. 17	Sunlight reflects off water at the same angle it shines on it. 18	19	
At more than four feet tall, the great blue heron is one of the largest wading birds in the Florida Everglades. 20	21	Howler monkeys are the loudest land animals on Earth. Their vocalizations can be heard clearly for 3 miles. 22	The muscles an alligator uses to open its mouth are incredibly weak, but the muscles it uses to close its mouth are very strong. 23	Sloths sleep up to 18 hours a day, eat a diet of all leaves, and only go down to the forest floor once a week! 24	25	The heaviest human brain ever recorded was over five pounds. 26	
27	A butterfly can taste with its feet. 28	Sponges are the only multicellular animal that do not have a nervous system. 29	30	31			

Columbus Day
